

xmradio is my radio content supplier by choice as it is clearly superior to standard broadcast for signal and content quality. viewed from a per song cost, it is also cheaper. moreover, it is free from rude, bad mouthed behavior seen on standard broadcasts where recently certain "shock jocks" have been taken off the air. i rely on it for much of my information, including traffic and weather, and i object to moves by such groups as the NAB to curtail their offerings to me. if anything, you should look at limiting the below standard quality of their content. i will be watching this issue as it moves forward, and will use all of the resources available to me as a private citizen to blunt the efforts of a few, who have taken up this cause for dubious purposes. coming from a state where personal freedoms are held in the most sacred of places, i cannot believe that congressman markey is involved in this.
